

# DISCUSSION

- Collaborative analytics (data markets, federated learning, etc.) vs fully open data
- Use cases for data sharing in the RES sector (beyond forecasting)
  - How to generate additional value for data owners from data sharing?
- Edge vs cloud computing for RES forecasting
- Use of spatial-temporal information for forecasting. Valuable for industry or just academic hype? Barriers?
- R&D challenges for the next years
  - Plethora of data market implementations (with pros and cos)
  - Forecasting extremes with spatial-temporal data
  - Large-scale forecasting (a single model for all RES power plants)
  - More?
