Seasonal Forecasting Techniques at DWD

1. Global dynamical coupled model system with data-assimilation in ensemble mode:

The German Climate Forecast system

1. Statistical downscaling for the region of Germany

MPI-ESM-HR/German Climate Forecast System 2.1 (GCFS2.1)

ECHAM6:

- horizontal resolution T127~ ($0.9^\circ \times 0.9^\circ$)
- vertical 95L up to 0.01hPa (80 km)
- Land model: **JSBACH**
- Run off model
- Transient GHG's, aerosol, ozone, solar irradiance
- Current GHG conditions taken from ssp245

MPIOM:

- horizontal: 0.4°
- vertical: 40 levels
- Sea-ice-Model
- Geo-Bio-Chemical Model

Coupler OASIS3:

- Hourly exchange between ocean and atmosphere

MPI-ESM-HR/German Climate Forecast System 2.1 (GCFS2.1)

ECHAM6:

- horizontal resolution T127~ ($0.9^\circ \times 0.9^\circ$)
- vertical 95L up to 0.01hPa (80 km)
- Land model: **JSBACH**
- Run off model
- Transient GHG's, aerosol, ozone, solar irradiance
- Current GHG conditions taken from ssp245

MPIOM:

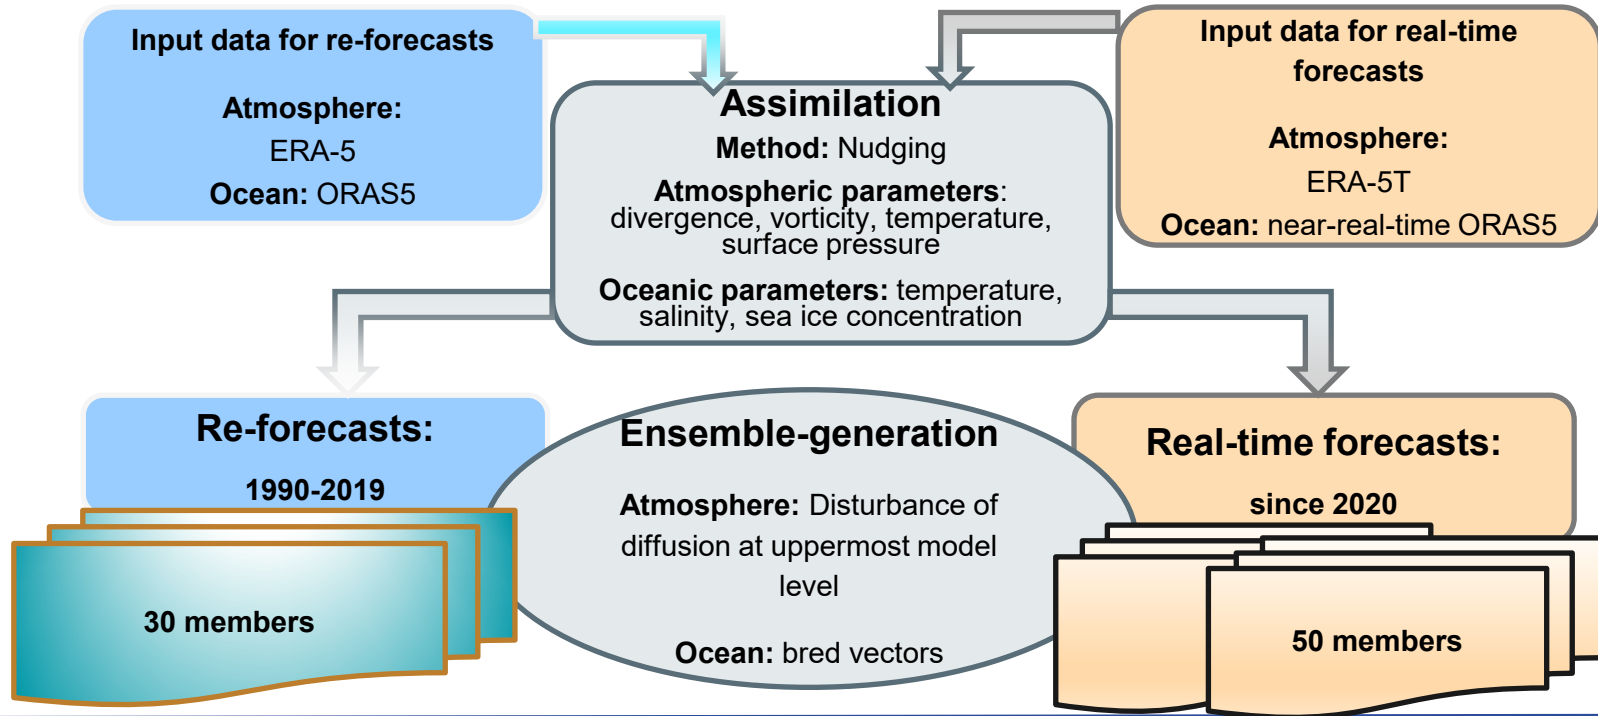

- horizontal: 0.4°
- vertical: 40 levels
- Sea-ice-Model
- Geo-Bio-Chemical Model

Coupler OASIS3:

- Hourly exchange between ocean and atmosphere

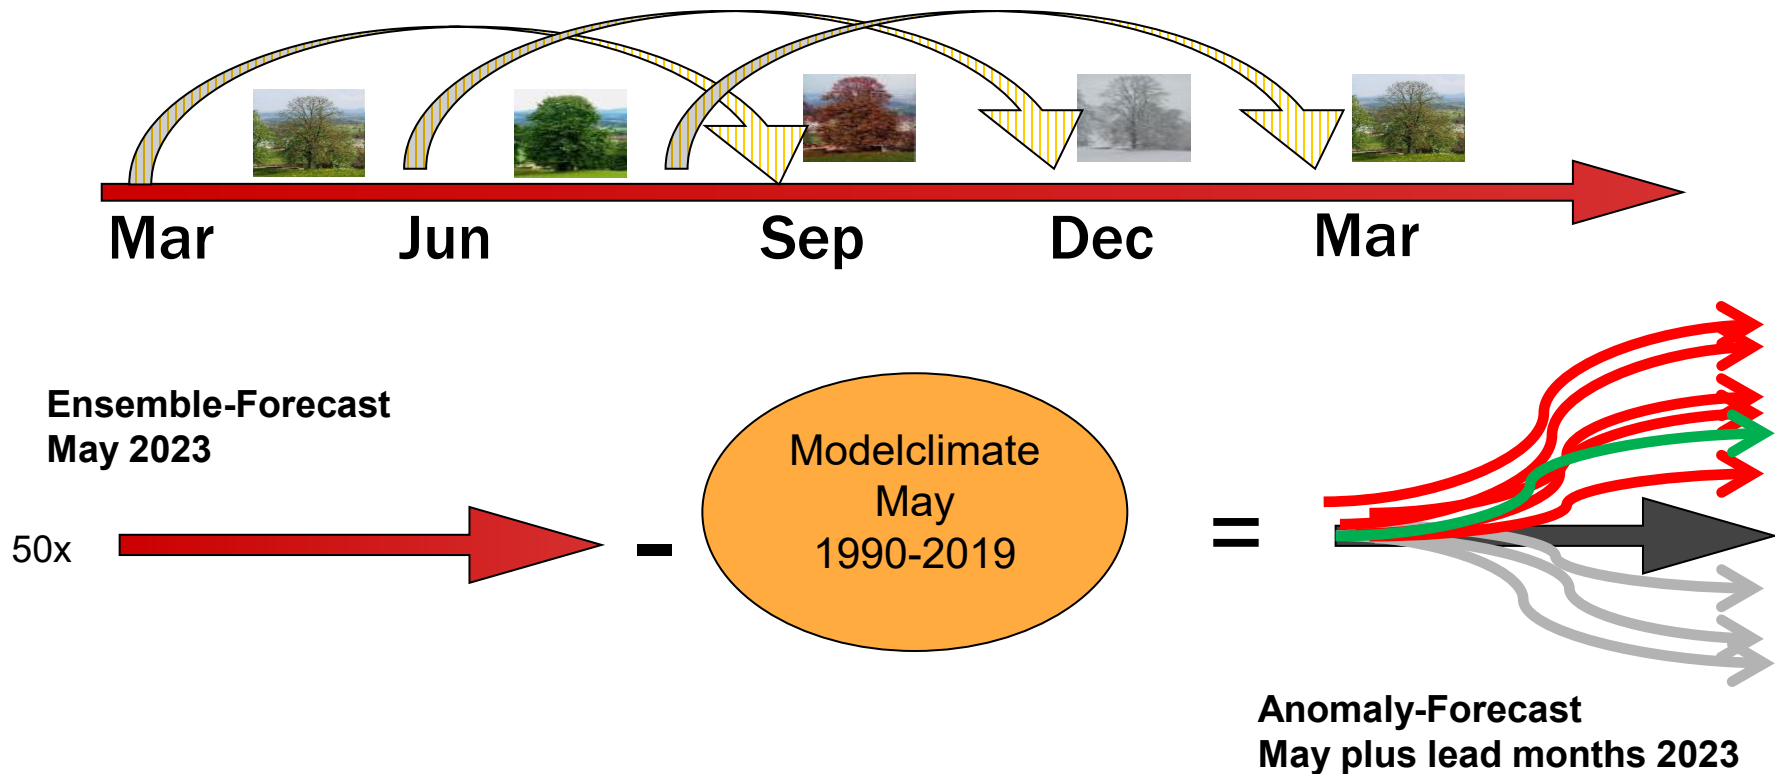

Configuration GCFS2.1

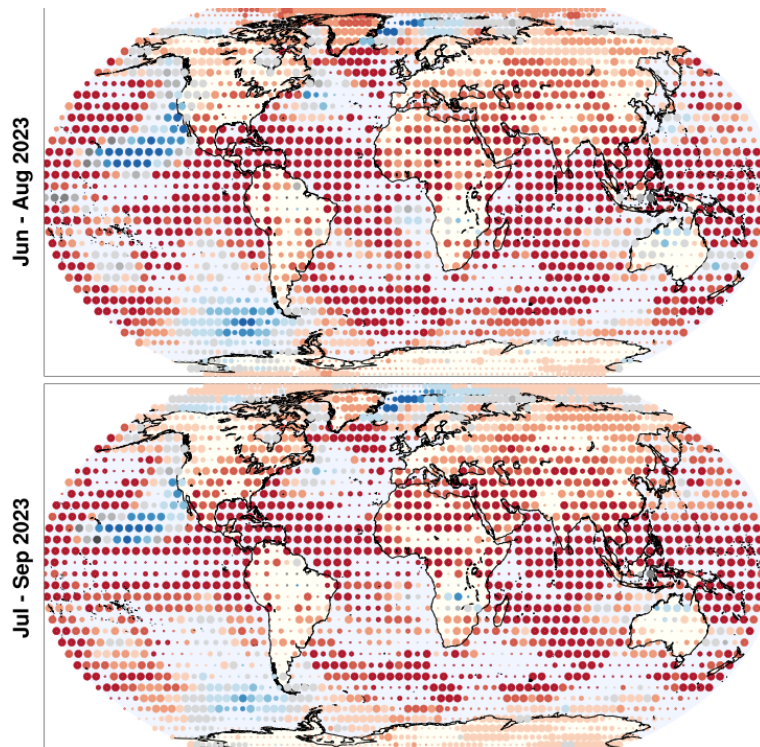

Workflow of Hindcasts GCFS2.1

Workflow of Forecasts GCFS2.1

Current summer 2023 prediction

Probabilistic prediction for temperature:

The colour represents the most probable category (Cold/Normal/Warm) of the climate prediction (3-month mean) in comparison to the climate characteristics for 1991-2020. The brightness describes the probability of this category.

Prediction skill:

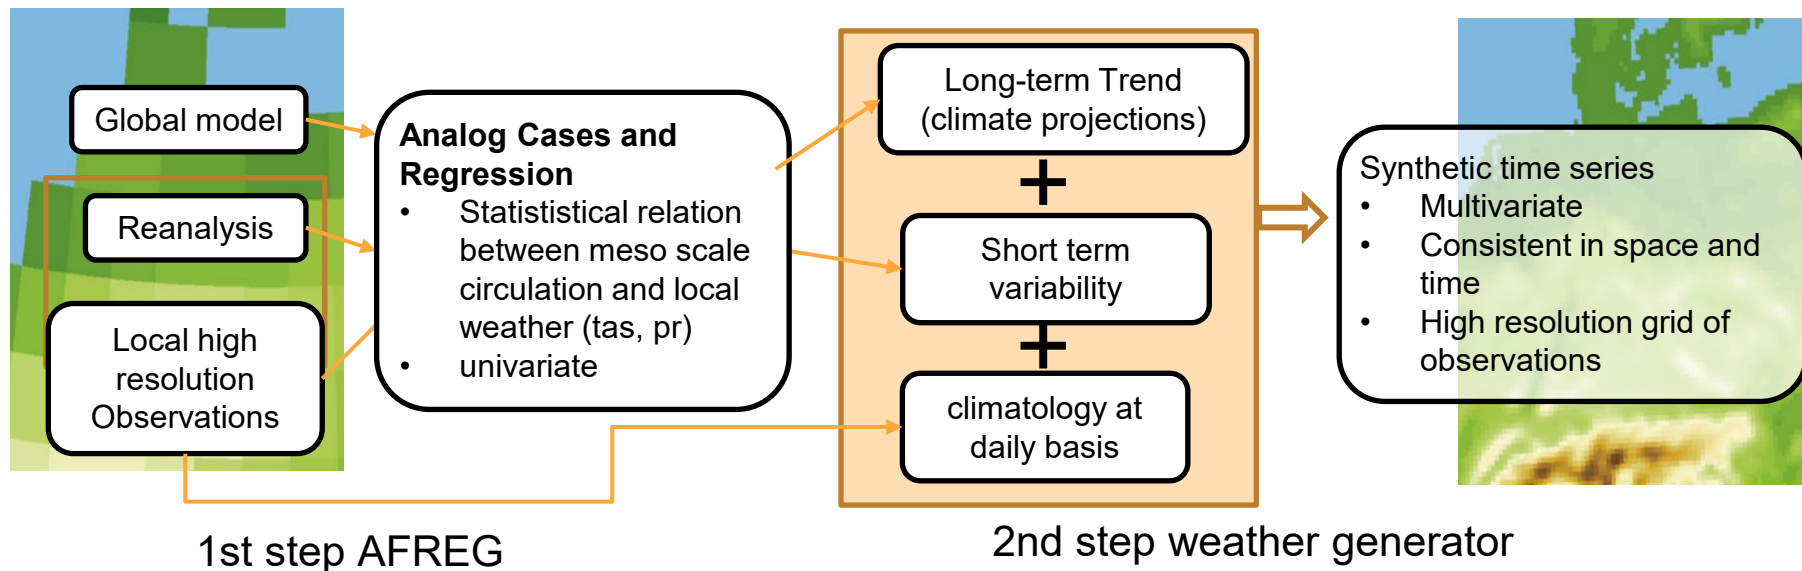

The size of the dots shows the skill in the evaluation period 1991-2020:

- significantly worse than the observed climate mean
- comparable to the observed climate mean
- significantly better than the observed climate mean

Prediction start on 01 May 2023, generated on 04 May 2023 © DWD

Method: Perfect-Prog-Approach

Kreienkamp, F., Paxian, A., Früh, B. et al. Evaluation of the empirical-statistical downscaling method EPISODES. Clim Dyn 52, 991–1026 (2019). <https://doi.org/10.1007/s00382-018-4276-2>

Method: Perfect-Prog-Ansatz

Why statistical downscaling?

- ✓ Ressource efficient (operational climate prediction!)
- ✓ multivariat
- ✓ low bias wrt to observations
- ✓ Forecast skill is maintained

1st step AFREG

climatology at
daily basis

2nd step weather generator

Kreienkamp, F., Paxian, A., Früh, B. et al. Evaluation of the empirical-statistical downscaling method EPISODES. Clim Dyn 52, 991–1026 (2019). <https://doi.org/10.1007/s00382-018-4276-2>

Why (not) statistical downscaling?

- !! Forecasts represent only already observed events
- !! Only selected variables according to the high-resolution data set in use
- A local high-resolution data set of observations or reanalysis, where 100m winds can be produced is of extreme help (e.g. COSMO REA6)
- !! Only daily values so far
- This depends on the algorithm of EPISODES and could be extended in a daily cycle. Other approaches, like ML, again by using a high resolution reanalysis set could help as well

Kreienkamp, F., Paxian, A., Fröh, B. et al. Evaluation of the empirical-statistical downscaling method EPISODES. Clim Dyn 52, 991–1026 (2019). <https://doi.org/10.1007/s00382-018-4276-2>

Current summer 2023 prediction

May - Jul 2023

Jun - Aug 2023

Probabilistic prediction for temperature:
