

2. EDITION

**EXPERT GROUP STUDY
ON
RECOMMENDED PRACTICES
FOR WIND TURBINE TESTING
AND EVALUATION**

3. FATIGUE LOADS

2. EDITION 1990

*Submitted to the Executive Committee
of the International Energy Agency Programme
for
Research and Development
on Wind Energy Conversion Systems*

RECOMMENDED PRACTICES FOR WIND TURBINE TESTING

3. FATIGUE LOADS

2. EDITION 1990

Edited by:

Peter Hauge Madsen
Risø National Laboratory, Denmark

In cooperation with:

Jos W.M. Dekker
ECN, The Netherlands

Sven Erik Thor
FFA, Sweden

Ken McAnulty
Energy Technology Support Unit, UK

Hermann Matthies
Germanischer Lloyd, W. Germany

Robert W. Thresher
Solar Energy Research Institute, USA

Table of contents

	Page
1. INTRODUCTION	3
2. SCOPE	4
3. DEFINITIONS AND UNITS	5
4. TESTING METHODOLOGY	6
4.1 General considerations	6
4.2 Environmental conditions	6
4.3 Duty cycles	6
4.4 Time series recordings	7
4.5 Modes of operation	8
4.5.1 Normal operation	8
4.5.2 Abnormal operation	9
4.5.3 Test and calibration operation	10
5. DATA COLLECTION	11
5.1 Quantities to be measured	11
5.1.1 Atmospheric conditions	11
5.1.2 Wind turbine operation	11
5.1.3 Loads	13
5.2 Recordings	15
5.2.1 Duty cycle	15
5.2.2 Time series recordings	16
5.2.3 Sample rates for time series recordings	16
6. ANALYSIS OF THE TEST DATA	17
6.1 Duty cycles	17
6.2 Loads	18
6.2.1 Time series combination	18
6.2.2 Load signal analysis	18
6.2.3 Load cycle counting	19
6.3 Correction for site characteristics	19
7. CONTENT OF TEST REPORT	21
8. REFERENCES	22
APPENDIX A. Description of the Rainflow Counting Method	23
APPENDIX B. Combination of Load Spectra	29
APPENDIX C. Fatigue Damage Calculations	31
